

Supplier Environmental Management Arrangements

Teek It Ltd recognises the importance of ensuring that suppliers and third-party service providers apply environmental protection measures that are appropriate to the activities for which they are engaged.

As a materials supply, logistics coordination and software-enabled business, Teek It Ltd adopts a proportionate approach to supplier environmental management that reflects the size, nature and risk profile of the organisation.

Environmental protection arrangements in relation to suppliers include:

- Considering environmental factors during supplier selection, including compliance with applicable environmental legislation and regulations.
- Requiring suppliers and logistics partners to operate in accordance with relevant environmental laws and recognised good practice.
- Encouraging responsible sourcing, waste reduction and efficient transport and delivery practices where reasonably practicable.
- Monitoring supplier performance on a proportionate basis and reviewing arrangements where environmental concerns are identified.
- Reviewing supplier arrangements where activities, suppliers or operating practices change, to ensure continued appropriateness of environmental controls.

Teek It Ltd does not operate a formal ISO 14001 certified Environmental Management System. However, environmental protection considerations are integrated into supplier engagement and management processes to support responsible and sustainable business operations.

Responsibility: Managing Director
